Secure Data Wiping for Trustworthy I Asset Recycling

PRESENTED BY

DESHANNTH M– 24CSR048

AKILAN S G– 24CSR014

NAVEEN P– 24CSR202

Problem Statement

- Many people keep old laptops unused for years because they worry their personal data could still be recovered by others.
- Fear of exposing bank details, private photos, and confidential documents discourages users from selling, donating, or recycling old devices.

What is the problem?

People don't trust that "delete" or a factory reset truly erases their data — and cheap/free tools don't prove otherwise.

Who faces it?

Everyday individuals, small businesses, and recyclers handling old laptops, phones, and hard drives before resale or disposal.

Why does it matter?

This fear keeps devices locked away instead of reused, directly fuelling India's growing e-waste crisis.

Our Idea

Wipe It, and Prove It

- Portable tool that runs directly from a USB drive.
- Securely erases all data, including hidden and deleted files.
- Prevents recovery of sensitive personal or business information.
- Generates a digitally signed certificate after successful wiping.
- Enables safe resale, donation, or recycling of old devices.

Estd : 1984

Built on Proven Technology

Layer	Technology
Frontend / UI	Electron / PyQt (simple cross-platform interface)
Backend / Core Engine	Python + C (disk access), hdparm, nvme-cli
Database (for certificates)	SQLite (lightweight local database)
Reporting	reportlab (PDF certificate generation)
Deployment	Bootable Linux USB/ISO (Ventoy)

THANK YOU
